Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Thomas A. Warden and Mary L. Fant. Lilia George provides word processing and table formatting support. Editorial support is furnished by Matha R. Evans, Current Information and Popular Publications Branch, Information Division, Economics Management Staff. Data processing support is provided by Sharlan Starr and William Meiller, Agriculture and Trade Analysis Systems Branch, Data Services Center.

Digest

FY 1993 Exports Show Little Growth (see p. 2). U.S. agricultural exports for fiscal 1993 (October 1992-August 1993) totaled \$39.4 billion, an increase of less than 1 percent over the same period in FY 1992. High-value product (HVP) exports increased 4 percent to \$22.1 billion, offsetting the 3-percent decline to \$17.3 billion in bulk exports. The value of bulk exports fell, despite volume gains, because of lower corn prices and a plunge in cotton shipments. Beef, poultry meat, and fresh and processed vegetables were three HVP commodity groups that maintained FY 1993 exports at FY 1992 levels.

U.S. Agricultural Imports Up Slightly in FY 1993 (see p. 5). U.S. imports of competitive farm products during the first 11 months of FY 1993 boosted total agricultural imports to \$22.5 billion. Competitive commodities gained \$360 million over the previous year to \$17.4 billion, while noncompetitive products, such as coffee and cocoa, fell 4 percent in value to \$5.1 billion.

Import Share of Consumption in 1992 (see p. 6). The 1992 import share of consumption for selected commodities indicated a mixed picture compared with 1991. Grain products, such as wheat and rice, continued their upward trend, while the import share for meat and some horticultural commodities turned downward. The import shares for these commodities reflected changes in domestic production and changes in consumption patterns. The import share for tropical products such as bananas, coffee, and cocoa was at 100 percent of consumption.

U.S. Agricultural Trade Boosts Overall Economy (see p. 10). U.S. agricultural exports generate income, employment, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1992 stimulated another \$1.44 (\$42.9 billion stimulated an additional \$61.7 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 902,000 full-time civilian jobs, including 562,000 jobs in the nonfarm sector.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status. (Not all prohibited bases apply to all programs). Persons with disabilities who require alternative means for communication of program information (braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-5881 (voice) or (202) 720-7808 (TDD).

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, D.C., 20250, or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal opportunity employer.

FY 1993 Exports Show Little Growth

U.S. agricultural exports for FY 1993 (October 1992-August 1993), totaled \$39.4 billion, an increase of less than 1 percent over the same period in FY 1992. High-value product (HVP) exports increased 4 percent to \$22.1 billion, offsetting the 3-percent decline to \$17.3 billion in bulk exports. The value of bulk exports fell, despite volume gains, because of lower corn prices and a plunge in cotton shipments. Beef, poultry meat, and fresh and processed vegetables were three HVP commodity groups that maintained FY 1993 exports at FY 1992 levels.

Wheat exports totaled 33.2 million tons for the October-August period, 4 percent higher than last year. Even though shipments to the former Soviet Union (FSU) and China, two of the largest U.S. wheat export markets, fell by 50 percent compared with a year ago, exports gained on larger shipments to Nigeria, South Africa, India, and Morocco. Drought conditions in Morocco and South Africa boosted U.S. wheat exports to 1.8 million tons and 670,000 tons, respectively. Exports to India surged to nearly 900,000 tons as the government imported to rebuild its stocks, and shipments to Nigeria rose to over 1 million tons after the government lifted its ban on wheat imports in the fall of 1992.

Corn shipments gained 3 percent to 38.2 million tons through August. But corn was exported at an average \$101 per ton, down \$13 per ton compared with fiscal 1992, lowering the value of corn exports to \$3.9 billion, 7 percent below the year earlier level. Exports slowed substantially during the June-August months compared with a year ago, due to sharp drops in shipments to the FSU and Korea. This year, corn exports did not benefit from sales to South Africa, which made significant purchases during the fourth quarter of fiscal 1992 because of drought conditions.

Soybean exports were 9 percent ahead of the year-ago level, but slowed in August to below normal shipments of only 670,000 tons, as larger South American supplies for fall 1993 slowed U.S. shipments. During fiscal 1993, Indonesia and Malaysia were significant growth markets for soybeans, rising 173 percent to over 800,000 tons. The European Community (EC), purchased

8.3 million tons of soybeans through August, about 16 percent more than last year. Shipments to the EC were strong at the beginning of the fiscal year due to diminished supplies of rapeseed to crush and low South American export supplies last fall.

Cotton exports through August fell to 1.1 million tons, 25 percent below last year. An 8-percent drop in the export unit value to \$1,356 per ton depressed the value of exports to \$1.5 billion, 31 percent below last year. Exports were lower to every major market. Shipments to China, normally a top-5 market for U.S. cotton during the last few years, virtually stopped in fiscal 1993, totaling only 160 tons, compared with 172,000 tons in fiscal 1992.

Beef exports totaled nearly \$1.9 billion through August, a 3-percent increase over fiscal 1992. Beef exports advanced because of shipments to Japan, which rose 20 percent to \$1.1 billion, and accounted for slightly more than 60 percent of U.S. beef shipments. There were also gains to Hong Kong and Europe, but the combined value of these beef exports was less than \$60 million.

Poultry meat exports reached nearly \$940 million, surpassing the 1992 record. Over 40 percent of U.S. poultry meat was shipped to Asian markets, including the Middle East, with growth of 28 percent above last year for China, Hong Kong, Korea, and the Middle East region. Exports also grew by 25 percent to Mexico, reaching \$180 million.

Horticultural exports rose to \$6.5 billion, an increase of 4 percent over fiscal 1992. The value of fruit, fruit juice, and nuts declined this year, but increased fresh and processed vegetables pushed horticultural exports higher. Fresh vegetable exports totaled over \$900 million, and shipments to Canada, the leading market with over 75 percent share, rose 13 percent in value, but volume remained unchanged from 1992. Higher prices, particularly for celery, lettuce, peppers, and tomatoes, pushed export values higher. Processed vegetable products rose 20 percent to \$1.3 billion, with broad gains to Canada, Europe, and East Asian markets. *(Joel Greene, Commodity and Trade Analysis Branch, 202-219-0822)*

Table 1--Agricultural, nonagricultural, and total trade balance of exports and imports

U.S. Agricultural Imports Up Slightly in FY 1993

U.S. imports of competitive farm products during the first 11 months of FY 1993 boosted total agricultural imports to \$22.5 billion. Competitive commodities gained \$360 million over the previous year to \$17.4 billion, while noncompetitive products, such as coffee and cocoa, fell 4 percent in value to \$5.1 billion.

Imports of cattle rose sharply to almost 2.4 million head valued at \$1.3 billion. Canada's shipments

increased 16 percent and Mexico's shipments jumped 51 percent above a year earlier.

Fresh vegetable imports surged about one-third to more than \$1.2 billion, with sharp increases in tomatoes, cucumbers, broccoli, peppers, potatoes, squash, and other produce primarily from Mexico and Canada.

Imports also increased for pork, cheese, rice, pasta, grapes, strawberries, coconut oil, cut flowers, and flower bulbs. (*Thomas A. Warden, Commodity and Trade Analysis Branch, 202-219-0822*)

Import Share of Consumption in 1992

The 1992 import share of consumption for selected commodities indicated a mixed picture compared with 1991. Grain products, such as wheat and rice, continued their upward trend, while the import share for meat and some horticultural commodities turned downward. The import shares for these commodities reflected changes in domestic production and changes in consumption patterns. The import share for tropical products such as bananas, coffee, and cocoa was at 100 percent of consumption.

Grain Imports

The 1992 import share of consumption for wheat (including products in a wheat equivalent) gained more than any other commodity compared with 1991. Wheat imports surged nearly 70 percent, pushing the import share to a record 8.4 percent. The import share has risen sharply during 1990-92, more than doubling, as wheat imports from Canada advanced.

Rice consumption has grown steadily in the United States, with per capita consumption increasing from 9 pounds in 1980 to nearly 17 pounds in 1992, due partly to a growing immigrant community that traditionally eats more rice than other grains. Rice imports increased with the consumption growth. Imports rose 10 percent in 1992, and the share of consumption continued its steady rise, reaching 8.8 percent. The import shares for rye and barley exceeded 100 percent because import quantities were greater than the amount consumed in the food system. For example, some of the grain may have been used for livestock feed or alcohol production.

Animal Product Imports

The 1992 import share of red meat consumption declined from 7.9 to 7.4 percent, the lowest since 1984's 6.8 percent. The import share of beef consumption rose 0.1 percent to 10.1 percent. U.S. beef consumption rose less than 1 percent in 1992, while imports increased 1.4 percent, leading to a slight gain in the import share. Beef imports from Australia and New Zealand slowed in 1992, as voluntary restraint agreements lowered beef imports, but shipments from Canada, which are not covered by the U.S. Meat Import Law, rose

nearly 55 percent, contributing to a modest increase in beef imports.

Pork imports declined by 17 percent in 1992. Imports from Eastern Europe fell due to production disruptions, and Denmark sold more of its pork in higher priced European markets. As a result, the import share of pork consumption fell to 3.7 percent, and lowered the overall share of red meat consumption. The lamb import share increased, but had little effect because it accounted for a very small share of both red meat consumption and imports.

The U.S. dairy industry supplies most of the Nation's milk and dairy needs, so imports are mostly limited to certain types of cheeses and casein. In 1992, domestic production of all dairy products rose nearly 2 percent, and consumption rose 1 percent. Dairy imports accounted for 1.7 percent of consumption, a decline of 0.1 percent from 1991 due largely to lower cheese imports. Total dairy imports fell 4 percent, lowering the dairy import share in 1992.

Horticultural Imports

The import share of consumption for fresh fruit dropped from 37.9 percent in 1991 to 36 percent in 1992, the second highest on record. Citrus imports declined significantly in 1992 as California recovered from a severe freeze in December 1990 that seriously damaged 1991 production. The import share of citrus jumped to 7.1 percent in 1991, but dropped back to 4.8 percent in 1992. The import share of apple consumption dropped from 6.5 percent in 1991 to 4.7 percent in 1992, as apple production increased in Washington State.

Fresh vegetable imports declined 10 percent in 1992 because of reduced shipments from Mexico, as heavy rains in early 1992 sharply reduced imports of tomatoes, onions, and peppers. Therefore, the import share of consumption fell from 9 percent in 1991 to 7.3 percent in 1992, the lowest level since 1982. The decline was greatest for fresh tomatoes, as the import share dropped to just 12 percent of consumption in 1992, compared with 21 percent in 1991.

The import share for tree nuts jumped to 36.3 percent of consumption, the highest share since

1975. Imports of pecans rose 50 percent in 1992, and cashews increased 24 percent to contribute to the large gain in import share.

Methodology

Table 5 shows the import share of consumption for selected commodities. The import shares were calculated by dividing import quantities by food disappearance data available in the Economic Research Service's supply and utilization tables. In

the supply and utilization tables, disappearance is the quantity available for food consumption. In some cases the import share may be overstated because an unknown quantity of imports is used outside the food system. However, the import share could be understated for some commodities because the commodity import data do not capture the amount of product ingredients, such as beef imported in frozen dinners or sugar imported in baked goods. (*Joel Greene, Commodity and Trade Analysis Branch, 202-219-0822*)

Table 5 -- Import share of food supply for domestic consumption by commodity for selected years

Data on import share of consumption is available for 1992 in the USDA publication "Food Consumption, Prices, and Expenditures, 1970-92," September 1993. However, the data in table 5 for vegetable oils were calculated from data published in the 1993 Oil Crops Situation and Outlook Yearbook.

1/ Excludes game fish consumption.

2/ Includes cultivated catfish.

3/ Excludes the nonfish content of canned fishery products.

4/ Milk equivalent of all dairy products calculated on a milkfat basis.

5/ Natural equivalent of cheese and cheese products. Includes all types of cheese except full-skim American and cottage, pot, and baker's cheeses.

6/ Olive oil imports.

7/ Includes palm kernel oil, palm oil, and coconut oil.

8/ Includes almonds, Brazil nuts, cashews, chestnuts, filberts, Macadamias, pecans, pignolias, and walnuts.

9/ Includes apricots, avocados, cherries, cranberries, nectarines, peaches, pears, pineapples, plums, prunes, strawberries, papayas, and miscellaneous fruits.

10/ Flour and other grain products included, grain equivalent.

11/ Includes flour equivalent of macaroni products.

12/ Kona coffee, grown in Hawaii, accounts for about 0.1-0.2 percent of total U.S. coffee consumption.

U.S. Agricultural Trade Boosts Overall Economy

U.S. agricultural exports generate income, employment, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1992 stimulated another \$1.44 (\$42.9 billion stimulated an additional \$61.7 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 902,000 full-time civilian jobs, including 562,000 jobs in the nonfarm sector. Farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

U.S. agricultural export value increased by almost 10 percent from 1991 to 1992 (\$39.3 versus \$42.9 billion). Production from more than a third of U.S. cropland was exported including an estimated 67 percent of wheat, 42 percent of rice, 34 percent of soybeans, 21 percent of corn, and 38 percent of cotton produced in FY 1992 (October 1991-September 1992).

After years of steady growth, U.S. agricultural exports peaked in 1981 at \$43.3 billion, but then declined 33 percent by 1986. In 1992, agricultural exports reached the 1981 current dollar value. Bulk and processed agricultural exports provided employment for 1.2 million workers in 1981. Employment from agricultural exports in 1992 required over 902,000 workers. Exports in 1981 generated \$106.3 billion in business activity: \$43.3 billion for exports and \$63 billion for supporting activities. Exports generated \$105 billion in business activity in 1992: \$42.9 billion for exports and nearly \$62 billion for supporting activities. Thus, each dollar received from agricultural exports produced a multiplier effect of more than two. Net exports in 1992 contributed \$18.3 billion to the U.S. trade balance, an increase from \$16.5 billion in 1991.

Exports Generate New Business, Add Jobs

The United States exported \$42.9 billion of agricultural products in 1992. The value of exported raw products was \$16.8 billion; processed commodities, \$16.2 billion; and transportation and trade services for raw and processed products, \$9.9 billion.

The nearly \$62 billion in 1992 supporting activity included \$11.3 billion from the farm sector, \$5.5 billion from the food processing sector, \$16.4 billion from other manufacturing sectors, \$8.8 billion from trade and transportation, and \$19.8 billion from other services. Nonfarm sectors of the economy received about 82 percent of the additional economic activity.

Of the 902,000 full-time jobs related to agricultural exports, more than 340,000 U.S. farmworkers, 10 percent of the farm labor force, worked in the production of export commodities. In addition, 562,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 73,000 were in food processing, 225,000 in trade and transportation, 96,000 in other manufacturing sectors, and 167,000 in other services.

Bulk Exports Continue To Decline

Maintaining a trend begun in 1990, bulk agricultural exports (grains, oilseeds, and cotton) held the minority share of exports. Non-bulk (fresh fruits and vegetables, semi-processed, and high value processed) products contributed the most value to the \$42.9 billion in agricultural exports in 1992. Higher value agricultural exports accounted for \$25.5 billion, or 59 percent of all direct exports.

Bulk exports have a smaller proportional effect on the nonfarm economy than processed exports. Direct bulk exports generated an additional \$18.9 billion of business activity while direct non-bulk exports generated an additional \$42.8 billion (\$1.09 additional output per dollar of bulk exports compared with \$1.44 for all agricultural exports and \$1.67 for higher value exports).

The additional business activity attributable to bulk exports was distributed differently across economic sectors (4 percent to farming, 34 percent to manufacturing, 47 percent to other services, and 15 percent to wholesale trade and transportation) than the additional business activity for higher value agricultural exports (25 percent to farming, 36 percent to manufacturing, 25 percent to other services, and 14 percent to wholesale trade and transportation). Of the 902,000 jobs related to U.S. agricultural exports, 569,000 (63 percent) supported non-bulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially through the 1970's. Net U.S. agricultural exports (exports minus imports) rose to \$27 billion in 1981 from about \$1 billion in 1969. Net agricultural exports of \$18.3 billion partially offset a \$114 billion deficit in nonfarm trade in 1992, leaving the U.S. trade balance in deficit by \$96 billion.

The Effect of Agricultural Imports on U.S. Output

The United States imported \$24.6 billion in agricultural commodities in 1992. Some \$5.7 billion was spent on items such as bananas, coffee, and tea, that did not compete directly with U.S. agriculture. The balance of \$18.9 billion was spent on imports (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that compete with U.S. products.

Since 1987, noncompetitive farm product imports have been declining at an annual rate of about 2 percent. Competitive agricultural imports are moving in the opposite direction, growing annually by 6 percent. Only competitive imports were included in the input-output (I/O) analysis of the effects of imports on the economy.

Using the I/O model, ERS estimated that the equivalent domestic output effect of the \$18.9 billion of competitive imports in 1992 was \$48.5 billion. That is, each dollar spent on imports would have required roughly another \$1.56 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.56.

Stimulating the U.S. Economy Through Agricultural Trade

Almost all of the positive trade balance or direct benefit comes from bulk agricultural exports. The port value of other agricultural exports and total imports just about offset each other (Table 6). The additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The economywide 1992 net business surplus for agricultural trade was an estimated \$50.4 billion, a result of \$104.6 billion of total output generated by farm exports minus \$54 billion stimulated by agricultural imports (including noncompetitive imports).

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$28.1 billion of output associated with agricultural exports more than offset the \$11.1 billion of farm output implicitly lost because of competitive agricultural imports. All manufacturing, including the food processing sectors, gained \$17.4 billion in total output, about 72,000 jobs and \$4.8 billion in income.

Some industrial sectors were examined for their net gain or loss due to trade. In terms of income, employment, and output, trade benefitted the meat and grain processing, fats and oils milling, and the miscellaneous foods industries. Agricultural trade was not beneficial to domestic dairy plants, beverage and flavoring makers, sugar, canners, freezers and dehydrator industries. The net effects offset each other for confectioners and bakers.

The U.S. economy outside of farming and food processing directly accrued a net \$5.7 billion from agricultural trade and a net increase in output of \$25.8 billion after considering the output lost to competitive agricultural imports.

Nonfarm Sector Receives Most Income Effects

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in 1992 generated \$2.44 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes.¹ Thus, the \$42.9 billion of agricultural exports in 1992 generated \$104.6 billion of total economic activity but \$42.9 billion of the income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The I/O analysis used in this article enables researchers to determine the impacts of imports on the economy had they been domestically produced. The following descriptions of income

¹ This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. More purchasing power is spread throughout the total economy. The heightened activity, trade, and transportation can boost investment in plants and equipment. Because I/O analysis does not consider this additional spending, our estimates of the economywide influences of agricultural trade are conservative.

from imports is income which would have been realized had those commodities been produced in the United States.

In 1992, the share of total income attributed to agricultural exports and competitive imports to the nonfarm sector was 73 percent and 80 percent, respectively; with nonfarm, nonfood sectors of the economy receiving 63 percent of income from agricultural exports and 63 percent of the income effects attributed to competitive imports. The distribution of the income remaining within the farm and food processing sectors differed markedly. The farm sector received 27 percent of the total income from agricultural exports, while the food processing sector received 10 percent, reflecting the importance of raw agricultural commodities in the export bill of goods. The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food processing sectors, with the food processing sector at about 17 percent and the farm sector generating about 20 percent of all import income effects, reflecting the greater importance of processed food products in the competitive import bill of goods.

Recent Data Revisions

There was a drop in output and an even sharper drop in employment from the years 1989 to 1990, without a corresponding drop in direct exports (Figures 1 and 2). The output decline was due to updated price and technology data released by the U. S. Department of Commerce that was first included in the analysis of calendar year 1990 exports. Employment figures were also affected by these changes and were even further reduced by an adjustment to account for the change in labor productivity from the base year 1982, to the present. This adjustment had the overall effect of lowering employment or jobs created by exports compared with previous reports. For a more thorough examination of how these changes affected output, income, and employment due to agricultural exports, consult the 1992 September/October issue of *Foreign Agricultural Trade of the United States (FATUS)*. (William Edmondson and Michelle Robinson, *National Economy and History Branch, Agriculture and Rural Economy Division, 202-219-0785*)

SUMMARY OF REPORT AH-702

Many States Restrict Landownership by Foreigners, Businesses

October 1993

Contact: Peter deBraal 202-219-0425

Many States have laws restricting ownership of U.S. land by foreigners and business entities. Others merely require such landholdings to be reported. A new report by USDA's Economic Research Service, *State Restrictions on Landownership by Aliens and Businesses*, December 31, 1992, summarizes those laws.

Most of the laws have been on the books for a number of years. Four States updated their landownership restrictions between 1990 and 1992. Kansas and Minnesota updated their corporate farming statutes to reflect the authorization of limited liability companies. Mississippi repealed its statutory restriction on purchases of State land by aliens and corporations, and Missouri repealed its constitutional (but not its statutory) restrictions on corporate landownership.

Restrictions on Foreigners

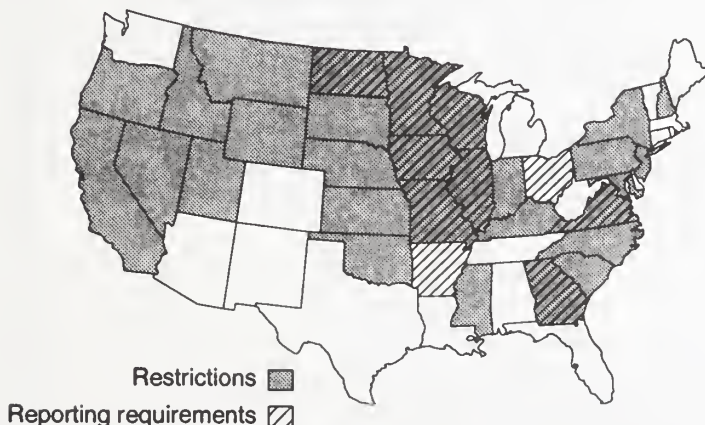

Twenty-eight States have some type of law restricting ownership of real property by foreigners. The restrictions vary greatly in the degree of their severity. Idaho, for example, merely restricts the acquisition of State-owned

lands or interests therein by foreigners. Other States, Kansas for example, restrict the acquisition of land generally or agricultural land specifically. Still other States (Georgia, Kentucky, Maryland) limit their restrictions to "enemy" aliens. Indiana and other States restrict the amount of acreage that foreigners may hold. Finally, some States, Minnesota, for example, prohibit alien ownership of land, but they generally have exceptions to those prohibitions for certain land uses, such as for mining or research.

Restrictions on Businesses

Thirteen States have laws restricting business entities from owning land or from farming in the State. Many of these laws restrict the ownership of agricultural land. But some restrict the ownership of real estate in general, while others restrict the purchase of State land. Several States, Iowa for example, have long lists of exceptions (such as for family farm corporations or authorized farm corporations) to the general restrictions. The 13 States are Arizona, Florida, Illinois, Iowa, Kansas, Louisiana, Minnesota, Missouri, Nebraska, North Dakota, Oklahoma, South Dakota, and Wisconsin.

Landholding restrictions on foreigners,
by State, 1992

SUMMARY OF REPORT #FAER-250

African Nations Reduce Government Intervention in Agriculture

September 1993

Contact: Stacey Rosen, (202) 219-0630

Taxes on farmers and food subsidies for consumers fell as the governments of nine African nations reformed their agricultural policies in the 1980's.

Agricultural Policy Reform: Issues and Implications for Africa, from USDA's Economic Research Service, traces effects of former government policies and subsequent reforms during 1982-89. Countries studied were Egypt, Morocco, Kenya, Tanzania, Zambia, Senegal, Nigeria, Zimbabwe, and South Africa.

Governments of these nations intervened significantly in agriculture during the 1970's and early 1980's, with heavily taxed farmers and widespread urban food subsidies. Governments also set prices and manipulated exchange rates which had the net effect of transferring income from producers to consumers. Such policies depressed farm production, leading to more food imports and higher foreign debt. Reforms began in the 1980's.

The new report measures government policy effects by estimating producer and consumer subsidy equivalents (PSE's and CSE's). PSE's are the ratios between the total value of policy transfers to producers and total producer revenue. A negative PSE signifies that government policies reduced producer revenue. CSE's are similar indicators on the consumer side. This study measures PSE's and CSE's for selected commodities for the nine African nations.

Government Intervention Distorted Both Foreign and Domestic Trade

These nine governments intervened in all stages of agricultural production and consumption. Marketing boards, often poorly managed, set production quotas and prices, and at times, imposed obligatory sales to government agencies. Artificially set food and producer prices distorted domestic trade, and unrealistic exchange rates deteriorated the balance of payments. At the same time, imports of raw materials and capital goods, essential for economic growth, were crowded out by the need to import food for the growing popula-

tions. Since agriculture contributes more than 30 percent of gross domestic product in Africa, the poor performance of this sector damaged these nations' overall economies.

International Response Brought Policy Reform

The World Bank and the International Monetary Fund insisted in the early 1980's on reforms in the agricultural policies of the affected countries. The goals of the reforms include limiting government borrowing and expenditures, reducing government deficits relative to the gross domestic product, reforming exchange rate policies, liberalizing markets, and decontrolling prices.

Agriculture Outlook '94

November 30 - December 1, 1993 * Washington, DC

Headlining USDA's OUTLOOK CONFERENCE . . .

- *The new priorities at USDA*
- *Prospects for trade and trade agreements*
- *Projections on the farm and rural economy*
- *Farming, the environment, and natural resources*
- *The menu for food safety and nutrition*

And featuring . . .

Sessions on all major farm commodities, farm finance, and food prices, led by USDA analysts and private sector experts.

For information, call (202) 720-3050, or fax requests to (202) 690-1805. Or write: Agriculture Outlook '94, Room 5143-South Building, USDA, Washington, DC 20250-3900

Can't be there? Watch the TV Broadcast. Tune in the Galaxy 3, C-band satellite, Channel 24, 9-5 Eastern time on November 30. It's free! Call for a program.

In town for the Outlook Conference?

Stay an extra day . . .

. . . for the **NASS/ERS Data Users' Meetings - December 2**

This year's focus: *Economic indicators
(including farm income, costs of production,
and farm prices)*

An opportunity for users of USDA economic statistics —

- to learn about survey procedures and analysis, and data applications
- to comment on data programs and offer suggestions.
